Terrorism

Until recently, many Americans believed that terrorism only affected other countries. Now we know that it can happen here, but we don’t know where or when. Much of the fear caused by terrorism—or the threat of it—is based on this uncertainty: not knowing whether it will hurt us or our loved ones directly, or whether it will target our own community or workplace.

Governmental officials are working hard to find terrorists and to limit their ability to harm Americans. At the same time, there is a lot that each of us can do to limit the terrorists’ ability to frighten us. The terrorists are not in charge. We have control over our peace of mind and can help ensure our safety by taking some of the same actions that we would take to prepare for earthquakes, floods, or fires. We can also contribute to the safety of others by becoming more aware of our surroundings and reporting suspicious activities or items to local officials.

The simple steps on the reverse side of this Focus Sheet will help you maintain your sense of control, and they could make a big difference in your personal safety in any emergency.

What You Can Do Now

Preparing for terrorist attacks is the same as preparing for earthquakes, fires, and other emergencies. It all starts with a family emergency plan.

- Evacuation: Whether you are at home, at work, or in a public place, think of how you could leave quickly and safely. Locate stairways and emergency exits. Pay attention to posted evacuation signs in buildings, subways and crowded public areas.
- Out-of-state contact: Think how you will get in contact with your family if you become separated. Choose an out-of-state contact that your family members or friends can call to check on each other.
- Meeting place: Decide where you and family members will meet if the emergency affects your home, or if officials have to evacuate your neighborhood.
- School plans: Learn the emergency plans at your children’s schools, and make sure the school has your updated emergency contact information. Give written permission to a trusted friend or neighbor to pick up your children from school or day care in case you cannot get there on time.
- Preparation for children: Teach your children what to do in an emergency, and make sure they know their own names and addresses, as well as the full names and contact information for parents and a second adult emergency contact.

Finally, review your emergency plan and assemble and maintain an emergency supply kit at home, at work, and in your car.

What You Can Do During an Attack

Terrorists are counting on surprise, fear, and confusion to add to the impact of their actions. If you realize an attack is underway, gather all your strength to pause and think. Look around you to see what is happening, and what immediate steps you can take to protect yourself and others.

- If there is flying debris, drop down; take cover under something sturdy, and hold on to it with one hand while protecting your head and neck with the other.
- If there is smoke, get near the floor, cover your mouth and nose with a cloth, and move carefully toward the nearest marked exit.
- If it is necessary to evacuate, try to do so calmly. Use only marked exits and stairways. Never use elevators. Help others who are moving more slowly or who may be disoriented. Condition red indicates an actual eruption. The USGS estimates such an alert will be issued once every few centuries.

If you are not directly affected by the attack, try to stay calm, think before you act, encourage others, and comfort children. Tune on news radio or television, and listen for official instructions. Follow the directions of authorities.

What You Can Do After an Attack

Try to stay calm. Think before you act. Don’t let terrorists get what they want most: to hurt a few people in order to intimidate many.

- Stay informed. Listen to official reports and instructions on the radio or television.
- If officials order an evacuation, cooperate quickly and follow their instructions regarding evacuation routes and shelter locations.
- If officials tell you to “Shelter in Place,” they mean for you to stay inside your home, vehicle or workplace until it is safe to come out. They will provide you with detailed instructions.
- Do not leave your sheltered location or return to the evacuated area until local officials confirm that it is safe to do so.
- Implement your family emergency plan, and notify your out-of-state contact of your location and status.
- Be aware of the psychological impact that terrorism can inflict, even when it happens to people you do not know personally.

HEALTH TIP: Acts of terrorism may result in little physical damage, but they can bring fear, confusion and uncertainty into everyday life. It is important to understand that strong emotional reactions to such events are normal. Re-establish daily routines for work, school, play, meals, and rest. Work with the support networks within your community.
You can’t predict. You can prepare!

Emergency Survival Program (ESP)

Use the Emergency Survival Program’s new list of actions as your guide for personal and community emergency preparedness.

January
Then and Now
In large regional earthquakes, such as the 1906 San Francisco earthquake, or the terrorism acts of September 11, 2001, emergency response agencies might be overwhelmed. You, your neighbors, co-workers and classmates may be forced to take actions on your own. Take time now to learn about what happened then and how it can prepare you for the safety actions to take now.

February
Make a Plan
Planning for an earthquake, terrorist attack, or other emergency is easier than you think. Make sure that your emergency plan includes evacuation and reunion plans; your out-of-state contact person’s name and number; the location of your emergency supplies and other pertinent information. By planning now, you will be ready for the next emergency.

March
Make Disaster Kits
Everyone should have disaster supplies kits stored in accessible locations at home, at work and in your vehicle. Having emergency supplies readily available can reduce the impact of an earthquake, a terrorist incident or other emergency on you and your family. Your disaster supplies kits should include food, water, flashlights, portable radios, batteries, a first aid kit, cash, extra medications, a whistle, fire extinguisher, etc.

April
Floods
Storms can cause flash floods, create power outages and damage homes. Assemble emergency supplies to include sand bags; identify safe routes; and teach children to avoid areas of potential flooding. When flooding occurs, listen to the radio or watch television for information and instructions.

May
Terrorism
Fear is a major tactic used by terrorists to achieve political and social objectives. But the terrorists are not in charge. You can fight back by taking many of the same actions you would to prepare for earthquakes, fires, and other emergencies. Start by having a family emergency plan. Also assemble emergency supply kits at home, at work, and in your car.

June
Public Health Emergencies
Public Health Emergencies may be related to outbreaks of infectious diseases, food and waterborne illnesses, and other threats to the public’s health and safety. Pandemic flu is of concern and health experts recommend the following to prevent the spread of flu: wash your hands with soap and water frequently; cover your cough and sneeze; stay home if you are sick. Stay away from others so they will not become sick. In autumn, get the flu shot!

July
Heat Wave
Although sun is necessary, exposure to ultraviolet radiation is potentially dangerous and can damage skin. Heat injuries that can occur include sunburn, heat cramps, heat exhaustion and heatstroke. If your home is not air-conditioned, spend time in public facilities like public libraries, malls, and community centers that are air-conditioned. Never leave children or pets unattended in hot vehicles.

August
Drop, Cover, and Hold On!
Learn what to do during an earthquake, whether you’re at home, at work, at school or just out and about. Taking the proper actions, such as “Drop, Cover, and Hold On”, can save lives and reduce your risk of death or injury. During earthquakes, drop to the floor, take cover under a sturdy desk or table, and hold on to it firmly. Be prepared to move with it until the shaking stops. If you are at the beach, move to higher ground.

September
Back to School
Schools should have emergency plans to meet the threat of terrorism, earthquakes and other emergencies. They should be updated and exercised regularly. Emergency supplies, such as water, food and other basic items, are also an important part of school preparedness. If you are a parent or guardian, know your child’s school emergency plan and make sure they have your updated emergency contact information.

October
Earthquakes
No one knows when the next earthquake will happen, but we can reduce its impact by being prepared. Identify hazards and remove or reduce them. Store emergency supplies and replenish them annually. Educate your family where to drop, cover, and hold on and take a first aid course. Conduct practice drills on a regular basis.

November
Fire and Ice
Preparedness is the key to surviving wildland fires and lethal winter storms. Timely preparation, including structural and non-structural measures to avoid the impacts of wildland fires and severe winter weather, can help reduce heavy repair expenditures following an event. Also remember to keep your car and other vehicles fueled and in good repair in case you are asked to evacuate. Have your emergency survival kit ready to go with you, just in case.

December
Landslides and Mudslides
Significant property damage can be caused by landslides and mudslides. Prepare an evacuation kit to include important documents and irreplaceable items such as photographs. When it rains, monitor the amount of rainfall and look for warning signs of landslides and mudslides such as new springs, tilted trees or new holes in hillsides.

Additional campaign materials are available through your local County Office of Emergency Management.
